

# Localization Toolkit 3 for LabVIEW™

**Make customers feel at home with your localized LabVIEW software**

- **display user interfaces in any language**
- **switch typefaces dependent on the language**
- **change languages on the fly**
- **manage translation entries**

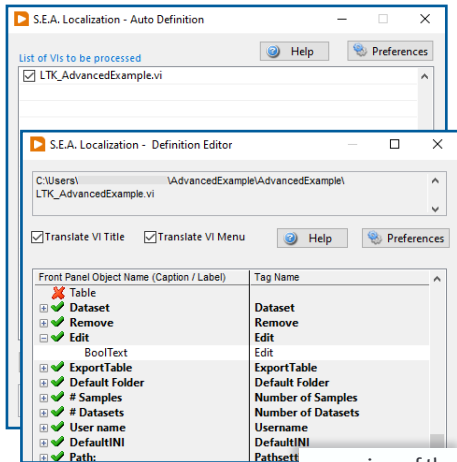

# Sell your LabVIEW software world-wide

The Localization Toolkit (LTK) for LabVIEW™ is an add-on package for NI™ LabVIEW™. The LTK enables you to provide user interfaces in any language. It simplifies the generation and maintenance of your world-wide usable LabVIEW applications.

## Simply to apply

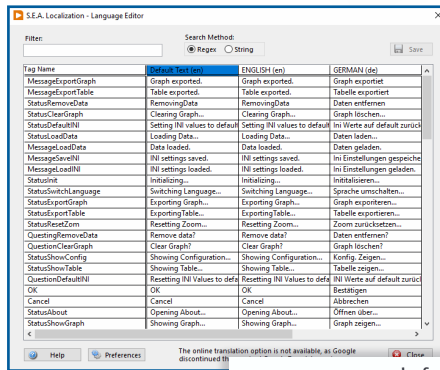

Three simple steps enable comprehensive multi-language support for your LabVIEW user-interfaces in a glance.

### 1. Define

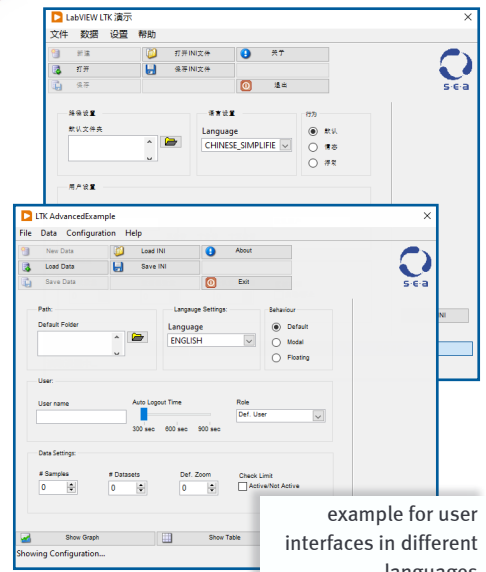

view of the definition editor

### 2. Translate

example for a translation table

### 3. Use

example for user interfaces in different languages

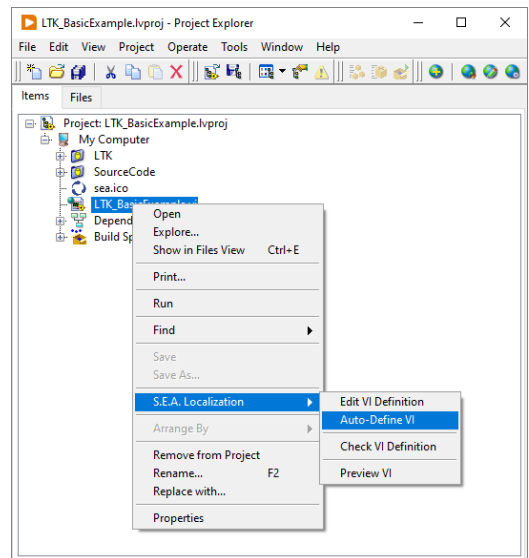

Language switching can either be performed by the user or under software control. The preview function allows quick control of the translated user-interface during the development or design phase.

## Function highlights of the LTK menus :

- the translation by specialists without the need of LabVIEW or programming expertise
- automated translation of the entire project or individual VIs
- language switching of multibyte languages (e.g. Chinese), select the font and size
- selective translation of individual components
- proof of definition consistency in the entire LabVIEW project

## Technical Information

- full integration with LabVIEW 2012 and higher
- simple and clear API
- compatible with Windows 7, Windows 10 and older versions

## The Localization Toolkit for LabVIEW™ includes:

- LabVIEW add-on LTK function palette
- language editor tool
- language extractor tool
- example VIs
